## — TRIATHLON

Bohang's contribution to the environment comes from its choice of raw materials, some of which are fully recyclable, such as polypropylene dry resin, while others are skin tests and performance tests to ensure complete health during the exercise. the organizations are certified as Oeko Tex and are harmless to humans and the environment. Throughout the manufacturing process, we save, reuse, and cut back wherever we can. All printing inks are environmentally and skin-friendly, and water-based. Most of the suppliers we work with have eco-friendly certifications and all of them carry out the same sustainability and social responsibility practices as us. We love the planet we live in and we want to do everything we can to protect it.
